Target version:				
Affects version:	3.2.2			

Description

Good day!

I'm using Ubuntu Linux 11.10 and Audacious 3.2.2 with the Global Hotkey module enabled, which I'm trying to use with my A4Tech KBS-26 multimedia keyboard.

Each time I reboot the system the multimedia keys stop working for Audacious (only, Banshee and Rhythmbox seem to be fine). To make the keys work I have to go Preferences-Modules-General-Global Hotkey and open the preferences of the module, then quit it without changing anything.This makes the keys work (sometimes only some of them work after the first time, so I have to repeat to make others work also). This works while the session is running, but after a restart I have to repeat the steps to make everything work again.

Thanks for your attention and help!
Boris

It might be a conflict with your desktop/window manager. Can you reproduce the problem in a plain xterm session?
