Target version:			
Affects version:	4.1		
Description Hi, I use Audacious Qt on the Wayland session of Fedora 34 Workstation (and also Fedora 33 Workstation) and the application crashes randomly, but especially when I activate the Activities Overview (or Activities corner). The bug is a little hard to reproduce. You have to use Audacious Qt as usual and after starting to play music for some time (30 minutes) you activate the Activities Overview and the app probably crashes. After to do a little research it seems that the bug is related to this. https://bugreports.qt.io/browse/QTBUG-66997			

History

#1 - May 10, 2021 03:12 - John Lindgren

My two cents: stick with X11 (or at least XWayland) for now. Qt on Wayland is pretty rough still.

#2 - August 27, 2021 22:41 - John Lindgren

- Status changed from New to Rejected

Closing, there are known issues with Wayland and we don't officially support it yet.
