Target version:			
Affects version:	4.1		

Description

I use ubuntu connected to my tv with 4k resolution but all the icons and apps look extremely small so I have enabled the scaling option to 200% and both the OS and other apps look perfectly fine but audacious is looks strange, only some parts look big, others look very small.

Audacious does not take into account the density of the screen or does not use points instead of flat pixels? This could cause problems in other types of screens for professional use with higher densities.

Are you using Wayland or X11? Do other Qt applications have the same issue?

```
whk@machine:~$ loginctl show-session 2 -p Type
Type=x11
whk@machine:~$ lsb_release -a
No LSB modules are available.
Distributor ID:    Ubuntu
Description:    Ubuntu 20.04.4 LTS
Release:    20.04
Codename:    focal
whk@machine:~$ xdpyinfo | grep -B 2 resolution
screen #0:
  dimensions:    4096x2160 pixels (1390x733 millimeters)
  resolution:    75x75 dots per inch
whk@machine:~$ date
mié 16 mar 2022 20:16:17 -03
```

Almost all applications works fine: Google Chrome, Mozilla Firefox, VLC, Krita, Atom editor, Steam, etc.
Applications that do not scale well: Gimp, Audacious.

I se audacious from Flathub package:

```
whk@machine:~$ flatpak list | grep audacious
Audacious    org.atheme.audacious    4.1    stable    system
```

You didn't answer either of my questions. Are you using Wayland or X11? Do other Qt applications have the same issue?

#5 - March 17, 2022 12:37 - John Lindgren

Closing anyway since Flatpak is not the recommended way to install Audacious. You should be using apt or apt-get.
