<b>Description</b>			
Ever since I've been using audacious I had a setting for playlist title to display file extensions in brackets, like this:  \${filename} (\${file-ext})  But ever since I resetted the configuration, the player stopped displaying the file extension - here's a screenshot of the setting. I tried with the qt interface as well but it still won't display it.  <a href="https://i.imgur.com/EuLI5fw.png">https://i.imgur.com/EuLI5fw.png</a>  And here's a screenshot of the same setting BEFORE the config reset: <a href="https://i.imgur.com/u7Dasi5.png">https://i.imgur.com/u7Dasi5.png</a> This was a setting leftover from 3.10.1.  Version 4.2-beta1.

As already mentioned in [#1167](#), your format is wrong.  
It must be "\${file-name} (\${file-ext})" instead of "\${filename} (\${file-ext})".

Are you both dumb and blind, by any chance? I already told you that it works with both 'file-name' AND 'filename'. I also told you I have a problem with the other string that's supposed to display the EXTENSION of the file!!! If you don't know what "extension" is, then educate yourself. I even showed you a screenshot of what {file-ext} is supposed to look like and you keep ignoring it! That makes me think you're dumb!

You keep ignoring my advice and apparently haven't even tried the correct format string.  
Therefore I am unsure who's dumb here. ;) It works! See the attached screenshots. End of story.

I have locked Jonathan's account. Name-calling is childish and not welcome here.
