<b>Description</b>			
With MPRIS interface, I can get a lot information of the metadata of the track, including album, artist, location, mtime, title, tracknumber, and year.			
However, the metadata exported through MPRIS2 interface, only xesam:album, xesam:artist and xesam: title are available. I wish more information such as mpris:length, xesam:url, and mpris:artUrl be exported to MPRIS2
