Target version:	3.0		
Affects version:	3.0		

Description

Starting with version 3.0 the "sticky" option doesn't work for me in Enlightenment 0.16. I've never used the built in sticky option, I've always used my window manager's sticky option, and it's worked for years. Now NONE of the methods for making it sticky work, niether e16's nor the one built into Audacious.

This has actually kept me from upgrading on my primary machine, it's a real deal breaker. How could I help debug this?

History

- Category deleted (libaudgui)

It's not working properly for me in XFCE either (Audacious 3.2-devel). Will look into it when I have a chance.

Hi, the root of this problem is a bug in GDK (which I mistakenly reported against XFWM4 almost two years ago, see https://bugzilla.xfce.org/show_bug.cgi?id=6192). GDK reports the sticky state of the window wrongly, and Audacious 3.1.1 makes the problem worse by setting, redundantly, the incorrect state reported by GDK. I have fixed the behavior on the Audacious side in this commit:

https://github.com/audacious-media-player/audacious-plugins/commit/655f053a81280b729c4a7fb67cb4b6e8f9c7d5fe

You will now be able to set the sticky state (either through the window manager or through Audacious) while Audacious is running, but the problem in GDK remains and the state may not be saved and restored correctly when you restart Audacious. I am attaching a patch against GDK, which I will also forward to the GDK team.
