Description

I have a few songs that I've tagged with id3tool and id3v2 and audacious can't read it's tags.

This is not commonly reproducible since all of my tracks are either tagged by id3tool/id3v2 or at least can be read by them.

The only fix seems to be to write the tags with audacious, or at least save the empty tags with audacious which clears the mp3 tags, then I can write them with id3tool and see them in audacious - but only after re-adding the song to the playlist.

An example song showing the failure is at:

http://GetDave.com/tmp/audacious_tags.mp3

- Description updated

- Status changed from New to Rejected

The file's ID3 tag is invalid because it contains a zero-length WOAR frame. You should report a bug in the program that wrote this tag.
