ubuntu lts 12.04 x64 do I have to use custom ppa to update cdaudio?

History

#1 - March 05, 2013 14:09 - Michael Schwendt

That's a problem in libcdio < 0.90. Its `cdio_config.h` redefines several preprocessor variables that use too much generic names and conflict when an application defines them, too.

Try the temporary work-around mentioned at the beginning of the `cdio_unconfig.h` file.

Alternatively, upgrade to libcdio >= 0.90 which adds an own `CDIO_` namespace to those variables.

#2 - March 06, 2013 15:41 - szymon krasuski

I have removed *.dev files of cdaudio support. there is no way to easily upgrade libcdio @precise. So 12.04 LTS is NOT your target/base system? Is 13.04 then?

#3 - March 07, 2013 19:35 - Michael Schwendt

I'm not an Audacious developer, and I don't run Ubuntu. I haven't examined your build problem in details either. I've only mentioned what I remembered about `cdio_unconfig.h` and what could be relevant. Audacious 3.4-alpha1 built without such problems for Fedora 18 (libcdio 0.83) and Fedora 19 development (libcdio 0.90).

#4 - March 09, 2013 20:50 - John Lindgren

- *Affects version deleted (3.4)*

libcdio's headers are broken, as Michael said. As a workaround, we used to `#undef` the macros and then `#include` our own `config.h` later, but doing so leads to other problems (<http://redmine.audacious-media-player.org/issues/256>). It is relatively simple to fix the headers. I will document how to do so in the release notes for the next alpha/beta version.

#5 - March 09, 2013 21:58 - John Lindgren

- *Status changed from New to Closed*

- *% Done changed from 0 to 100*

Found another workaround:
