<b>Description</b>			
<p>The latest development version of CogX (<a href="https://bitbucket.org/mamburu/cog">https://bitbucket.org/mamburu/cog</a>) has a nice feature where you can open an optional sidebar with a collapsible tree view of your Music folder. I think this would be nice to have in addition to the library view, since some people (myself included) prefer to look for their music in a folder-based hierarchy instead of with a search bar. For now I open up a nautilus window and drag the files I want to play, but it would be nice if this was built in to audacious. Thanks!</p>

- Status changed from New to Rejected

We're not going to build a file browser into Audacious. Sorry.
