FYI, pressing Play ('X' or Control-Enter keys) midway through a track restarts it.

im trying to get my media key's bindings properly sorted out. play = pause/resume in the program, so that isn't an option. i have 2 keyboards, both with media keys, 1 is a laptop keyboard, other is usb.

1st keyboard, has play/pause, rev, forward, stop, eject....

2nd is rev, play/pause, forward, stop....

I didn't know that you were talking about multimedia keys. In that case, I suggest simply pressing Stop and then Play (though I understand your desire to be able to accomplish the same thing with only one key).

#4 - November 21, 2013 01:50 - three sixes

yeah i need a rev/restart multimedia function to bind multimedia keys to. stop > play is what i was doing yesterday. im not too absurdly pressed for these features yet. though i can imagine they would be immensely useful for yer android phones / no kb tablet interfaces. i knew about these issues for a long long time, and i avoided audacious like the plague because of it. but alas my xmms has been exhausted. i learned bug trackers recently too.
