

Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Feature #395

Make the double scaling-feature work again when using Winamp Classic interface, like it did during GTK2

Description			
<p>Since HiDPI laptops are beginning to enter the market, it would be very beneficial to support this scaling feature again. I'm running audacious on a Lenovo Yoga 2 Pro using Gnome 3.10, and the icons and text when using the classic interface are barely readable, and requires sniping to hit with the cursor...</p> <p>This feature worked with GTK2, but not now with GTK3.</p>

Yeah, duplicate. Also, there is no way I am implementing this. Show me a clean implementation of the feature and I will happily merge it, though.
