Description

In the old good days, Winamp had a "Sexy Scrolling Voiceprint" vizualization from Nullsoft Tiny Fullscreen vizualizations, and it was very impressive, though simple.

Currently, voiceprint in Audacious works only in Winamp Skin, and has only small size. It would be great addition to have the voiceprint available as one of possible vizualization plugins in non-winamp UI. I would even donate some beer money for getting this feature.
