Description

I have a rather large music library(65,000+ mp3's).
I collect discographies and I use comments to mark songs to remove issues with the songs album and artist info and stuff like that.
I simply would like to have a comments tab added to the playlist, so I can sort the songs via comment then shuffle them around instead of having to use winamp to make playlists with.
I shouldn't think that would be difficult to do.

1. Added a sortable comment tab to the playlist area. Or add sort by comment in the sort playlist by. Either way.
2. Multiple song selection(seriously I remove 2-3000 songs when creating new playlists, my current playlist is right at 63,000 songs)
3. I like the player so far, I used it on ubuntu and like it on windows, and with active support, and a couple possible changes I would really like to use it more often.
4. Creating playlists with removed songs in winamp and importing to audacious sucks.

Thanks from a long time music listener. Keep up the good work guys.
