Affects version:			
Description			
How about that?			
Right now I perform it like that (and I do it quite often) :			
<ol style="list-style-type: none">1. click on one2. [Ctrl+A] to select all3. release [A] while still holding [Ctrl]4. click on those I want5. [Del]			
What I'm proposing :			
<ol style="list-style-type: none">1. click on those you want while holding [Ctrl]2. right-click on one that's selected3. click "Remove all except selected"			
Could save like... 2 extra seconds each time, wouldn't that be great ? xD			
(I recall that Winamp had such feature ~8 years ago when I was still using it on M\$!)			

History

I'm not sure what the point of the first step ("click on one") is. If it's only to move keyboard focus to the playlist, then you can probably save yourself those two seconds by pressing [Escape] instead. Then I count four steps, three of which are key-presses:

1. [Escape] to return focus to the playlist
2. [Ctrl+A] to select all
3. click on those you want while holding [Ctrl]
4. [Del]

Maybe I'm biased because I'm fast on a keyboard and slower with a mouse, but I don't think it's worth the (minimal) time saved to add a new context-menu item.
