Description

Running audacious with a WSZ file should install it as a winamp classic skin.

Winamp does this and it makes installing themes a breeze.

This would make sense but in the meantime you can use drag-and-drop (onto the main Audacious window in skinned mode) to install skins.

Ah, funny - I got here because I had tried dropping the skin onto the playlist window in skinned mode, so it just appeared in the list.

I see that it works from the main window, perhaps dropping on the playlist should also work ?
