Description

Hi,

adding a KDE Plasma icon-only task manager launcher for the Qt interface of Audacious is not possible.

The KDE devs said "[...] The application author has to install a proper .desktop file and mark up the window with correct metadata so we can map to it [...]", see:

https://bugs.kde.org/show_bug.cgi?id=375744

So, could you please do that?

Regards

We do install a .desktop file. It is not "missing". If you want the Qt interface to be launched by default, you can edit the .desktop file yourself and make it so.

Not a bug.
