

Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Feature #732

Add configuration option to disable recursion in directories

July 23, 2017 23:51 - Cristian Rigamonti

Status:	Closed	Start date:	July 23, 2017
Priority:	Minor	Due date:	
Assignee:		% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	3.10		
Affects version:	3.7.2		
Description			
Currently when running			
<pre>audacious my_dir</pre>			
the program adds all media contained in my_dir and all its subdirectories; the same happens in the GUI when selecting a directory with the "open" or "add" commands.			
Sometimes one only wants media contained in the directory, without scanning all its subdirectories. E.g. I sometimes by mistake run audacious on a directory which has LOTS of subdirs, sometimes even my \$home: a massive scan for subdirs starts, and I can't stop it even exiting the program GUI, I have to kill -9 all the audacious processes. You can think of other use cases.			
Please add a configuration option to enable/disable recursion into subdirectories.			
(audacious 3.7.2 on Linux)			

History

#1 - September 16, 2017 04:05 - Jim Turner

- File patchbug732.diff added

Will this do for starters?

Added boolean config option [audacious].no_subdirs that if set to TRUE stops recursive addition of subdirectories, along with gui checkbox in [Settings].[Playlist] for gtk & qt. FALSE || undef: keep current behavior.

#2 - September 20, 2017 01:53 - John Lindgren

- Description updated
- Status changed from New to Closed
- Target version set to 3.10
- % Done changed from 0 to 100
