Compile problem on Raspberry Pi under Ubuntu

April 16, 2018 17:06 - Ulrich Lauther

Status:	Rejected	Start date:	April 16, 2018
Priority:	Major	Due date:	
Assignee:		% Done:	0%
Category:	libaudcore	Estimated time:	0.00 hour
Target version:			
Affects version:	3.9		
Description			
As ppa nilarimogard/webupd8 seems to contain no current version of audacious for Raspberry Pi, I tried to compile myself.			
I did:			
<pre>export GLIB_LIBS=/lib/arm-linux-gnueabi/libglib-2.0.so.0 export GMODULE_LIBS=/usr/lib/arm-linux-gnueabi/libaudcore.so.3 export GLIB_CFLAGS="-Wl, " ./configure --disable-qt --disable-gtk make</pre>			
and got:			
<pre>plugin-load.lib.o: In function `plugin_load(char const*)': /usr/local/src/audacious-3.9/src/libaudcore/plugin-load.cc:68: undefined reference to `g_module_open'</pre>			
and similar error messages in plugin-load.cc			
Did I do something wrong? How can I fix it?

- Status changed from New to Rejected

The variables that you exported before running ./configure aren't correct.

You shouldn't need to set those variables manually. Install pkg-config and let it do its work.
