Description

I think Audacious is great. This last week - I assume after an upgrade (I am using Linux Mint 18), Audacious only plays a single song, and then stops, and I can't find anything in settings, or on the forum. I would be grateful for any advice on how to fix it.

Did you activate Playlist -> No Playlist Advance?

No, I didn't. It is possible something was changed without my knowledge - now that I think about it, we did find the cat sitting on my laptop keyboard the other day. And.. you are dead right, sorry for the inconvenience, and thank you for the support.

Well, I guess I should have asked, "Did you or your cat activate No Playlist Advance?" :)

Glad that solved it for you.
