- Status changed from New to Rejected

Audacious is very much designed around playlists. Playing a song without it being in a playlist would require a lot of redesign. I don't think we'll be supporting that in the near future.

The "Now Playing" playlist is intended to be the "temporary" playlist (in some places, it's still called that). The intent is that you'd use named playlists for any playlists that you care about keeping, and "Now Playing" when you just want to quickly play (or "test play" as you say) a song.
